## The Brief

## From local secrets to tourist hotspots, find the best places and things to do on your New Zealand holiday.

Tourism New Zealand works with the tourism industry to positively promote New Zealand internationally. They have a new campaign that is aimed at visitors staying for short periods, booking their own accommodation and arranging their own transport.

They have chosen to do this by creating a suite of regional specific single page web application that interweave logistical tourist requirements and the specific attractions of the area.

Tourism New Zealand want the app to have its own distinctive look and feel (whilst still remaining cohesive with the Tourism New Zealand brand).

TNZ requires a fully functional prototype to be created of one such region within Aotearoa. It needs to be a smartphone, evergreen mobile only website.

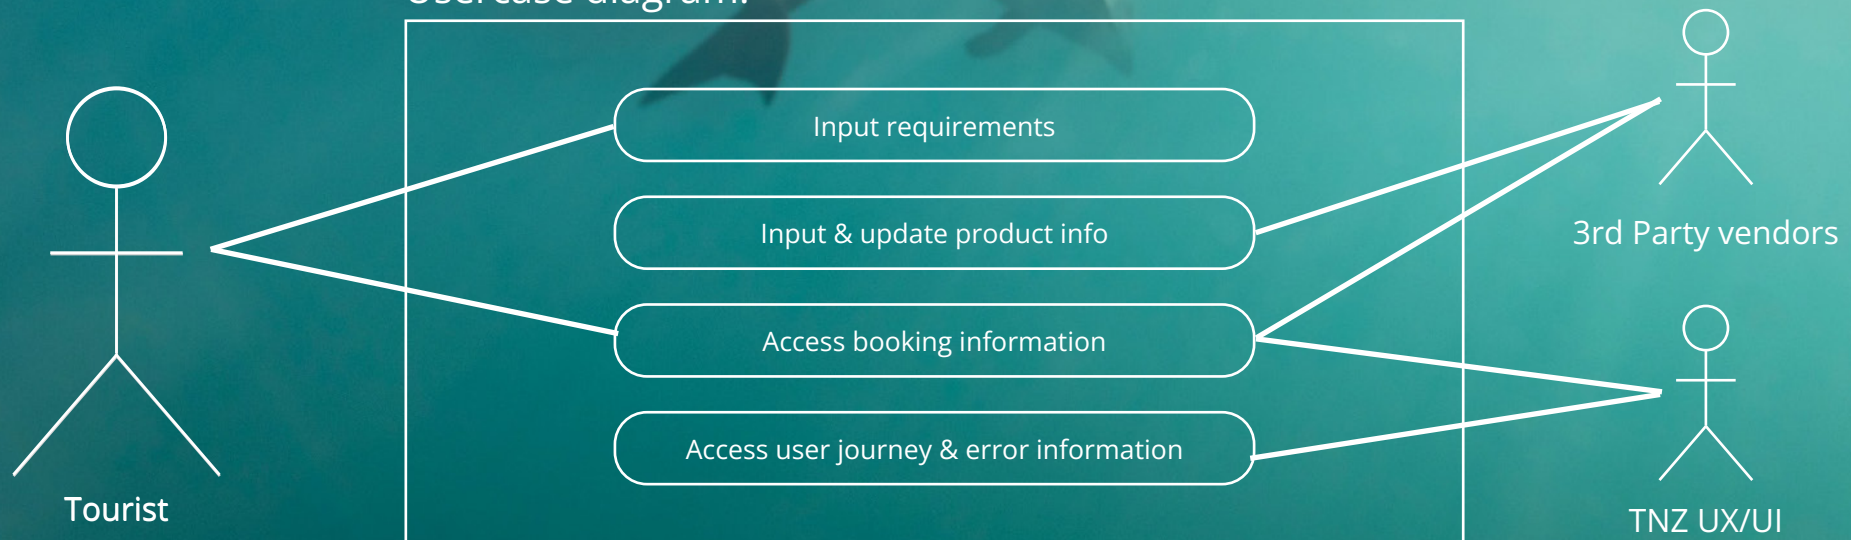

### **It needs to:**

1. display accommodation or transport options to the user based the information entered.
2. Calculate and display either accommodation or transport costs to the user.
3. Validate the information and provide meaningful feedback when validation has failed or passed.

# Deliverables

Usecase diagram.

# Production Timeline

## Week One

Design Front end wireframes and website based on client brief for the Tourist actor in the usecase scenario

Present / review and amend.

## Week Two

Build Front end website with front end javascript input implimented

Present / review and amend.

## Week Three

Develop and troubleshoot the backend javascript.

Debug and validate site.

Present / review and amend.

Thank you
